OPEN ARCHITECTURE
with increased flexibility, the system both supports Windows and Linux operating systems with seamless integration and upgradability

COMPREHENSIVE REPORTS
sales, government and ordering reports are automatically generated in just a few clicks!

EASY TO USE
transactions made easy with user friendly touch screen interface

TSCERES POS SOLUTION

The TSCERES is a POS tool locally developed and specifically designed to boost vital frontline transactions such as order placement and settlement of bill and back office management such as sales analysis and inventory tracking. Improve your customer service as sales are made easier and more accurate with its GUI interface with touch screen technology and support for full screen menu editing. Increase your profits as it provides management with daily sales and inventory information in real time.

Now, you can further increase your ordering process efficiency with our tablet ordering system for Android for more accurate order taking and faster kitchen turnaround times. The tablet ordering system allows for a more flexible wait system from item ordering, up to order customization right at the point of service.
